

HAMPTON ROADS, VIRGINIA • CHKD

Sofia is 12. She needs a **living kidney donor.**

In October 2025, after what we thought was a summer cold, Sofia was diagnosed with end-stage kidney failure caused by two autoimmune conditions. She is on dialysis **seven days a week at home** and is now officially on the transplant list. One healthy person can end that wait.

Blood type O positive or O negative — and every other blood type can still help.

Through **paired exchange**, a donor who isn't a match for Sofia can donate to someone else, and Sofia receives a matching kidney in return. If you are healthy and willing, please get screened.

How to be screened — about 10 minutes, online

- 1 Go to **sentara.donorscreen.org/register/now** (or scan the code below and follow the link).
- 2 Complete the confidential health questionnaire. Sofia's family never sees your medical answers.
- 3 Enter Sofia as the person you wish to donate to:

Name	Melina Sofia Lynn De La Lastra
Date of birth	October 15, 2013
Transplant hospital	CHKD — Children's Hospital of The King's Daughters

It costs you nothing

Donor evaluation and surgery are typically covered by the recipient's insurance.

Help with expenses

National programs may cover travel, lodging and lost wages.

Life with one kidney

Most donors go on to live healthy, normal, active lives.

You can stop anytime

Screening is confidential and there is no obligation at any step.
